

GAIA

Equipment with a rough design for all environmental conditions

Strong aluminum case.

High contrast illuminated LCD screen for a perfect view under all light conditions.

Specially designed for construction work and blasting monitoring.

One 3-Axis block of geophones.
One Microphone for air-pressure (optional).

The captured data is transferred to an SD card.

Very easy to use. Recommended for users that don't need advanced options in vibration measurement.

This equipment inherits the power of the Digital Signal Processing of its big brother Vibracord Tellus, for an extremely accurate vibration recording.

Frequency response:

2-250 Hz

1-315 Hz
